1	Dielectric Strength	Between lead wires	No failure	The capacitors shall not be damage when AC2600V(for Y2 Class) and AC4000V (for Y1 Class) are applied between the lead wires for 60 sec. (charge/discharge current < 50mA)															
		Body insulation	No failure	First the terminals of the capacitor shall be connected together. Then a metal foil shall be closely wrapped around the body of the capacitor distance of about 3 to 4mm from each terminal. Then the capacitor shall be inserted into a container filled with metal balls of about 1mm diameter. Finally AC2600V is applied for 60 sec. between the capacitor lead wires and metal balls. (charge/discharge current ≤ 50mA)															
2	Insulation Resistance (I.R.)		10000MΩ min	The insulation resistance shall be measured with 500±50VDC with 60±5 sec of charging.

The measurement at reference temperature 25° C																			
4	Dissipation Factor(D.F.)		Char.	Specified	The Capacitance shall be measured At 25°C with 1±0.1KHZ for X7R&Y5P, with 1±0.1MHZ for COG and 5Vrms max.														
			NPO/SL	Q ≥ 300															
			Y5P	D.F ≤ 2.5%															
			Y5U/Y5V	D.F ≤ 5.0%															
5	Temperature Characteristic		Char.	Cap. Change	The Capacitance measurement shall be made at each step specified in Table.

Pre-treatment: Capacitor shall be stored at max. temperature for 1hour. Then placed at room condition for (※)24±2 hours before measurements.																			
6	Robustness of Termination	Tensile	Lead wire shall not cut off Capacitor shall not be broken.	With the termination in its normal position the specimen is held by its body in such a manner that the axis of the termination is vertical the tensile force of 10N shall be applied to the termination in the direction of its axis and acting in a direction away from the body of the specimen.															
		Bending	Lead wire shall not cut off Capacitor shall not be broken.	With the termination in its normal position the specimen is held by its body in such a manner that the axis of the termination is vertical : a mass applying a force of 5N is then suspended from the end of the termination. The body of the specimen is then inclined within a period of 2 to 3 sec., through an angle of a approximately 90 in the vertical plane and then returned to its initial position over the same period of time; this operation constitutes one bend. One bend immediately followed by a second bend in the opposite direction.
